

N^o 17,274

A.D. 1890

Date of Application, 29th Oct., 1890

Complete Specification Left, 10th June, 1891—Accepted, 17th Oct., 1891

PROVISIONAL SPECIFICATION.

Improvements in and relating to Surgical Splints.

I ANNIE M^cCONNELL 71 Campbell Road, Bow E. Surgical and Medical Nurse, do hereby declare the nature of this invention to be as follows:—

A splint on which a patient can move a bad arm without pain.

5 The splint is 18 inches long by 6½ wide. There is a little wheel at each corner of the trolley or splint (it runs like a trolley). There is a thin piece of wood (12 inches by 4) nailed each side of the trolley or splint, to keep the arm in its place.

When required for use—a board is placed on the bed by the side of the patient, 30 inches long & 7½ wide—with a narrow rim 1 inch wide.

10 The trolley is placed on this board—the rim is to prevent the trolley or splint running off the board.

The nurse places the patients bad arm on the trolley or splint—they can then move their arm without pain. I have used it with great success. The splint and board are made of thin wood.

There are 4 wheels on the trolley splint, one at each corner.

15 Dated this 28th day of October 1890.

ANNIE M^cCONNELL.

COMPLETE SPECIFICATION.

Improvements in and relating to Surgical Splints.

20 I Miss ANNIE M^cCONNELL 77 Campbell Road, Bow E. Surgical and Medical Nurse, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

The trolley splint.

25 It consists of a platform B, on which a tray A fitted with wheels C moves easily up or down.

The former is fitted with a guard D (or rim) to prevent the tray passing over the end.

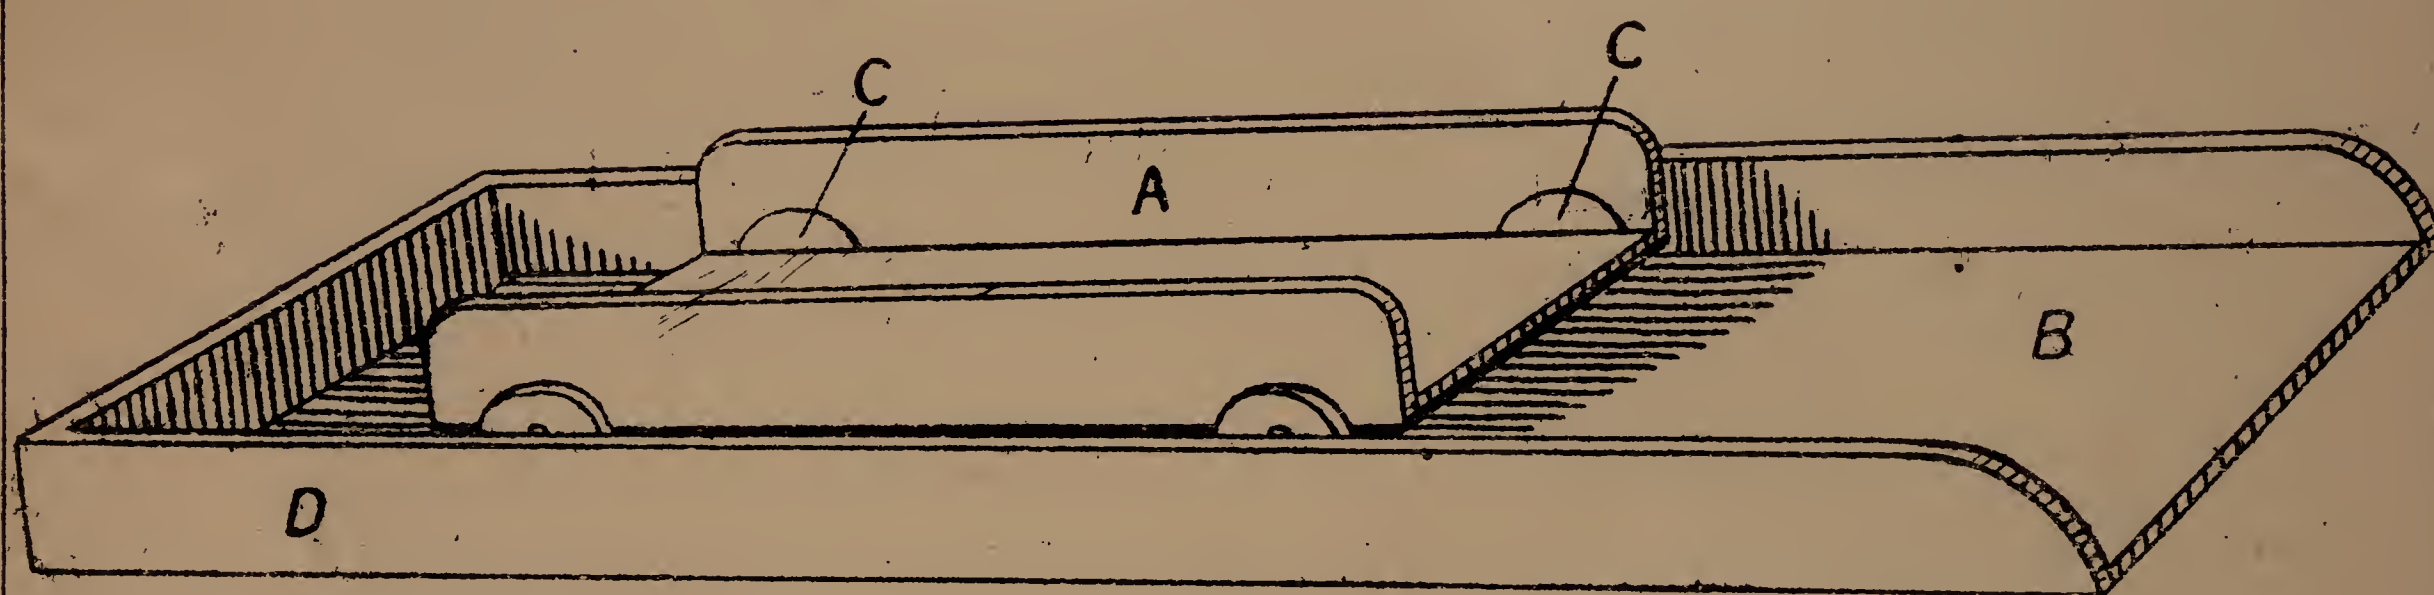

By its use a slight movement is allowed which prevents a bandaged limb becoming painful through being kept in a cramped position.

30 Having now particularly described and ascertained the nature of my said invention, and in what manner the same is to be performed, I declare that what I claim is

1. A patient can move a bandaged limb with ease.
2. It can be used on a table in a sitting room.
- 35 3. It takes off the weight of the bed clothes.

June 10th 1891.

ANNIE M^cCONNELL,
77, Campbell Road, Bow, E.
